## EFFICIENT, HIGH-PERFORMANCE FERROUS METAL SEPARATION

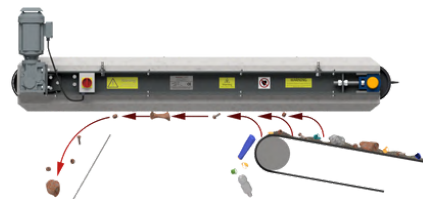

Magnapower Overband Magnets are high-performance separators engineered to extract ferrous metals from material streams in recycling and bulk handling environments.

Built for durability and precision, they combine innovative magnet technology with flexible configurations to deliver maximum metal recovery with minimal maintenance, even in the toughest operating conditions.

- Achieve cleaner end products with high-efficiency ferrous recovery
- Minimise wear and extend equipment life with heavy-duty construction
- Maximise separation precision - focused magnetic force targets only where needed
- Adapt seamlessly to your plant layout with flexible crossbelt or in-line installation options
- Choose from electromagnets or deep-field permanent magnets to suit your application
- High working gap separators available - enhance ferrous purity and minimise maintenance downtime
- Rely on expert technical support and fast, responsive service - every step of the way
