PUMPS

HANDLING
ABRASIVE
APPLICATIONS

CORPORATE OVERVIEW

Handling abrasive applications

Atlantic Pumps was formed and created out of a belief that customers deserved a better pump experience.

We understand our customers daily and hourly challenges and then bring sound, sensible solutions to their pumping needs.

Clients want an instant response

For most of our clients, their big challenge is downtime - it costs a fortune, it's very disruptive and it impacts directly on the safe operations on the site. Ultimately it leads to poor customer service for their clients. Often they just won't get the service support and the backup.

Clients want to know that they can get back up and running again and they want somebody to talk to who understands the challenges they've got onsite.

A large background image showing two workers in safety gear. The worker on the left is wearing a white hard hat and a dark jacket with a logo on the back. The worker on the right is wearing a dark hard hat and a dark jacket, holding a walkie-talkie. They are standing in front of a large pile of gravel or dirt.

We'll be there for you

Because of our customer friendly approach, you can contact us anytime. We'll often find site managers are dealing with complex information and it's not always meaningful to them. We explain our solutions in a clear and concise way that they can trust.

Research & Development

We've increased investment in research and development, CAD drawing and manufacturing facilities, enabling us to bring the latest technologies and the best practices for many different industries into your industry.

Industries & Applications

- Aggregates
- Anaerobic digestion
- Bio-Energy
- Breeze block manufacturing
- Coal washing
- Dewatering
- Dredging
- Dust suppression
- Energy
- Food manufacturing
- Large scale manufacturing
- Lime slurry
- Mine effluents
- Mining
- Paper manufacturing
- Quarrying
- Ready-mix concrete
- Recycling
- Sand processing
- Silt pumping
- Sump pumps
- Thickener underflow
- Wash plant feeds
- Water treatment

Our client list includes...

Site Maintenance and Pump Refurbishment

At Atlantic we recognise just how important after sales service and maintenance is.

Our service team are always on hand to assist and complete both in-house and on-site repairs and maintenance as well as full refurbishment packages.

Our fully trained fitters can attend your site in vans stocked with all the relevant tools and pump parts. They are backed up by our workshop facilities, which have the ability to completely refurbish the largest pumps found in the mining and quarrying industry.

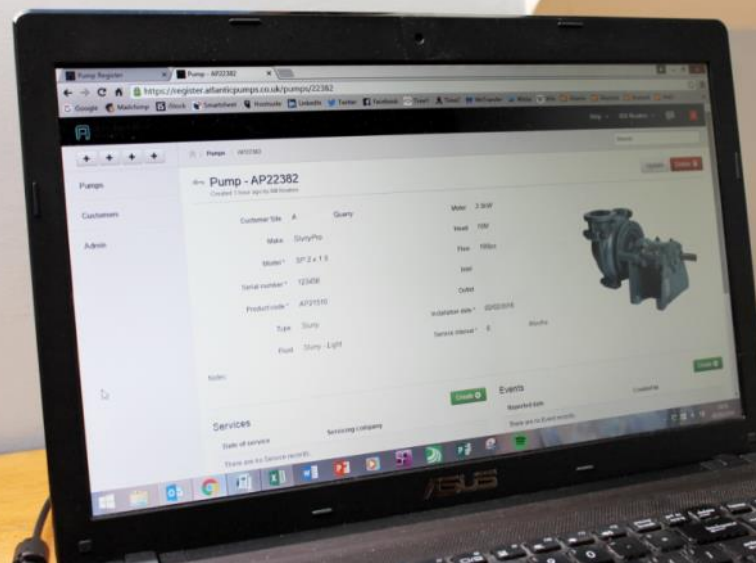

Add your pumps to The Pump Register!

The Pump Register is an online tool upon which we record all the details of the pumps on your sites.

- Massively speeds up quoting and hence delivery time if you have a pump that goes down
- Helps identify details when new spares are required
- Service reminders can be set up if needed
- Varying levels of access depending on number of sites covered

In addition to the above points, the Register is also a portal where users can log in to and add their own pumps. The user can see the pumps they already have and, particularly on ready mix sites the Register will help to standardise the pumps, which results in simpler maintenance and better pricing.

AUDEX

Designed with your industry in mind

Audex submersible dewatering pumps are designed for the pumping of dirty water and slurries.

We often say that clean water on a quarry is not clean water anywhere else. It has sand in it, it's cloudy and your average submersible pump just can't cope with that.

- Specifically developed for the most abrasive environments and applications
- Trusted by operators of quarries, mines and recycling facilities
- Quality, reliability and superior performance
- Increased pump life and less pump-related downtime
- Backed by Atlantic Pumps' servicing division

SLURRYPRO®

A better slurry pump experience

SlurryPro pumps are used extensively in quarries and mines globally and are proven to give you a better slurry pump experience.

We've optimised the design of the base for safety and ease of use and have also worked closely with seal manufacturers to achieve much longer wear life.

SlurryPro is all about heavy duty, giving you maximum wear life when processing and pumping really abrasive fluids.

- Superior wear life and reduces lifetime costs
- Designed for the heaviest duty applications
- Backed by Atlantic Pumps' servicing division

GROMATEX

Containing your abrasive fluids. Easy.

Gromatex was developed out of a belief that we could bring superior levels of wear life for all sorts of different wear applications.

Whether that's the pipework on your plant, your cyclones or your hopper bases, Gromatex brings superior wear life to the handling of abrasive fluids.

- Tried and tested in the harshest applications and environments
- Flexible and strong
- Cost-effective
- Simple end use
- Reduces maintenance and downtime anxiety
- Easy to specify and order from stock

Official UK distributor for LSM

LSM are one of the main players in the peristaltic pumps industry.

Used globally and known for their low energy consumption, low and easy maintenance and their exceptional build quality, LSM pumps are self-priming, high pressure pumps that are able to run dry and have the ability to pass large objects.

LSM produce a range of different sizes of peristaltic pumps ranging from common sizes such as the LSM-25 (1") up to the LSM-200 (8") model – recognised as the largest peristaltic pump in the world.

LSM pumps can be used in a wealth of industries including food, mining, chemical, fishing and agriculture. They are also used on and off shore, in biogas and in the production of concrete and paint.

EnviroHub

Simple and stress-free solutions for environmental protection

EnviroHub is an automated monitoring system for your site water discharge, abstraction and treatment.

The system can send you warnings when you are approaching the parameters set in abstraction or discharge permits. It can also control pumps and valves etc to automatically stop water movements, preventing the risk of contaminating water courses.

Furthermore the system can be integrated with corrective measure equipment, such as pH correction, settlement tanks, flow regulation and temperature control. This is all remotely accessible for review from anywhere and at any time.

Making your life easier!

If you're looking for rapid solutions to your pumping issues, Atlantic Pumps are the people to turn to.

You'll get sound, good quality, trustworthy advice and you'll get it quickly.

We'll also save you money!
