Personnel Access Control

Manage access control for personnel through doors, gates, barriers and turnstiles.

Personnel access

Most businesses need to manage staff entry and access on to site. In many situations, it is difficult to identify who and where staff members are at all times.

ZoneSafe Personnel Access Control is a Proximity Detection System that enables controlled access and security of all personnel when required, using hands-free technology.

How the ZoneSafe system works

Reader units are fitted next to all doors and turnstiles throughout the site where controlled access and security is required. Once fitted, each reader unit creates an invisible detection zone around each door or turnstile. The detection zone range can be adjusted to a specific distance, if required.

As part of the system, ZoneSafe tags are issued to all personnel who require access through the doors, gates or turnstiles. ZoneSafe tags are 8cm x 5cm and can be easily incorporated into clothing, attached to lanyards or simply kept in a pocket or bag.

When the pedestrian approaches the door or turnstile, the reader unit detects the tag and will automatically unlock the door. There is no need to present the tag to the reader, and leaves the pedestrian hands-free – helpful when carrying equipment or pushing trolleys.

Reader units can be set up individually, or multiple units can be connected over a network, with access to several doors, gates and turnstiles.
