

RETURN ROLLER CRADLES

**INTRODUCING OUR INNOVATIVE
GALVANIZED RETURN ROLLER
CRADLES, CURRENTLY
REVOLUTIONIZING ROLLER
REPLACEMENT IN QUARRIES
NATIONWIDE.**

These cradles offer a flexible walkway configuration, allowing for single or dual side walkways.

Traditionally, changing a return roller required two individuals and a Mobile Elevated Work Platform (MEWP). Our cradles change the game, enabling a single person to complete the task with ease. Equipped with a secure pivoting mechanism locked by a retaining bolt, the cradle ensures safety during roller replacement or unexpected failures. Using a standard spanner, engaging or disengaging the cradle is straightforward.

The cradle includes an ISO specification 102 mm (4") roller and is compatible with rollers from 102 mm (4") to 168 mm (6 5/8") for disc return rollers.

Installing these cradles as proactive safety measures above walkways transforms the installation process.
