Make it better.

# Bulk Handling Department

## Improving Conveyor Performance

Belt conveyors form an integral part of the manufacturing process in many industries, yet they are often highly problematical. Our team is dedicated to helping clients improve the performance of their conveyors by solving belt cleaning, tracking, spillage and dust problems. The team provide best-in-class equipment, installation services, and ongoing site support.

## Combatting Abrasion. Improving Flow.

Raw materials are often difficult to handle and bulk handling equipment & storage vessels can become a source of regular downtime. If you're looking to solve wear problems, reduce impact damage or minimise flow issues in chutes, hoppers and vessels, then our lining materials selected from world renowned specialists provide the optimum solution to your problem.

## Process improvement with clever components

Selecting innovative, problem solving equipment and components really can improve the performance of key pieces of production equipment. Our targeted approach to process improvement helps clients get the most out of both their process equipment and production facility as a whole.

Whether it be improvements to productivity, improvements in health & safety or reductions in maintenance – we're confident that our high performance components, manufactured by world leading materials handling equipment specialists, will help you to Make it better.

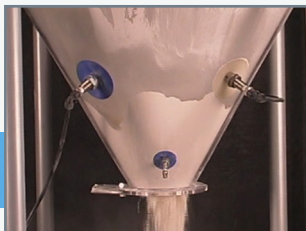

### Controlling dust

Flexible connectors. Filtration equipment.

i

Dust tight, snap-in connections on screens, sieves, sifters and bulk bag loaders with **BFM® fitting**.

### Low maintenance silos

Level Control. Filling components. Vibrators & Aerators.

i

Avoid bridging, rat-holing and compacting of materials in silos and other vessels with **Solimar aerators**.

### Abrasion resistance expertise

Mixer wear parts. Tungsten carbide.

i

Long-standing history of solving wear problem in mixers, and UK agent for **TEKA Maschinenbau GmbH**.
